Table 170

Expression of each cDNA in undifferentiated NT2 cells, in NT2 cells cultured in the presence of retinoic acid, or in NT2 cells that were cultured in the presence of retinoic acid and then further cultured in the presence of cell-division inhibitor added (This table also contains clones without description in Examples)

In the table, NT2, NT2\_RA, and NT2\_RA\_INHIB represent untreated NT2 cells, retinoic acid-treated NT2 cells, and retinoic acid/inhibitor-treated NT2 cells, respectively. The assay was performed in triplicate (n=3), and each result was shown in the column of exp.1, exp.2, or exp.3. In addition, "t-test N/R" and "t-test N/I" represent results of test for significance of difference between the untreated cells and the retinoic acid-treated cells, and between the untreated cells and the retinoic acid/inhibitor-treated cells, respectively. The results of the test are shown in the columns of \*:p<0.05 and \*\*:p<0.01.

Table 352

Expression of each cDNA in synovial cells or in the synovial cells in the presence of TNF  
(This table also contains clones without description in Examples)

In the table, Synoviocyte and Synoviocyte\_TNF represent synovial cells and TNF-treated synovial cells, respectively. The assay was performed in triplicate (n=3), and each result is shown in the column of exp.1, exp.2, or exp.3. In addition, "t-test vs TNF" represents a result of test for significance of difference between the untreated synovial cells and the TNF-treated synovial cells. The increase and decrease in the expression level of a particular gene in response to TNF are represented by + and -, respectively. The results of test for significance of difference are shown in the columns of \*:p<0.05 and \*\*:p<0.01.

Clone	Synoviocyte			Synoviocyte_TNF			t test		INC. vs TNF	DEC. and DEC.

Table 353

5 Expression of each cDNA in skin-derived fibroblast cells exposed and unexposed to  
ultraviolet light (the table also includes clones that are not described in Examples)

10 In the table, UV\_0h represents skin-derived fibroblast cells without ultraviolet irradiation;  
UV\_4h and UV\_24h represent skin-derived fibroblast cells 4 and 24 hours, respectively, after the  
irradiation. The assay was performed in triplicate (n=3) and each result is shown in the column  
of Exp1, Exp2, or Exp3. "t-test 0/4" and "t-test 0/24" represent the results of the test for  
15 significant difference between the unexposed cells and the cells 4 hours after the irradiation, and  
between the unexposed cells and the cells 24 hours after the irradiation, respectively. The table  
also includes the information on an increase (+) or decrease (-) in the expression level of the  
gene in the exposed cells 4 hours or 24 hours after the ultraviolet light irradiation. The results of  
20 the test for significant difference are shown in the columns of \*p<0.05 and \*\*p<0.01.

	Clone	UV 0h			UV 4h			UV 24h			t test		4h 24h +/- +/-
